MORPHISEC

Morphisec Overview – 2024

About

Founded in 2014, Morphisec, a pioneer in blast radius resiliency, keeps your business safe by intelligently anticipating and neutralizing threats - minimizing the impact and blast radius of cyber incidents and ensuring uninterrupted business operations without the need for constant tech team intervention or impact to performance.

Powered by **Automated Moving Target Defense (AMTD) technology**, the next evolution of cybersecurity, Morphisec protects over 7,000 organizations across nine million Windows and Linux endpoints, servers and workloads. Morphisec stops thousands of advanced attacks daily at Lenovo/Motorola, TruGreen, Covenant Health, Citizens Medical Center, and many more. Learn more at **www.morphisec.com**

Anti-Ransomware Assurance Suite

Morphisec fortifies your organization by diminishing the blast radius of attacks, to preemptively reduce the organization's exposure to cyber risk, pro-actively prevent advanced threats, and ensure optimal anti-ransomware defense. Powered by Automated Moving Target Defense (AMTD), this streamlined solution effortlessly integrates with your current endpoint protection array, enhancing existing protection capabilities or standing strong independently when necessary.

Adaptive Exposure Management

Impact Protection

Recovery Tamper Protection
Data Encryption Protection

Adaptive Exposure Management

Elevate your security posture with Adaptive Exposure Management that prioritizes vulnerabilities, automates the assessment of your security controls, identifies high-risk software, and addresses security misconfigurations.

Infiltration Protection

Enhance your cybersecurity resilience with Morphisec's prevention-first technology that continually changes the attack surface, rendering the target unpredictable, making it harder for attackers to exploit vulnerabilities.

Impact Protection

Augment your cybersecurity with dedicated Anti-Ransomware protection that proactively defends critical assets and data with a prevention-first strategy, minimizing recovery times and strengthening your anti-ransomware stance.

Professional Services

Morphisec offers multiple professional services to support the success of our customers, together with incident response services by Morphisec's security team.

Deployment & Onboarding: Quick, efficient setup for reduced risk to advanced attacks.

Concierge Services: Dedicated concierge that guarantees ideal performance and maximized platform benefits through best practices.

Incident Response: Fast, expert threat mitigation in Morphisec; minimizes cost by containing attacks and advising on prevention.

Benefits

Assurance: Gain peace of mind, knowing you're protected even when other safeguards fail, ensuring uninterrupted cyber defense.

Total Cost of Ownership (TCO): By preventing threats as early as possible and classifying them accurately, Morphisec significantly reduces the time and costs for tech resources as well as the financial impact.

Enhanced Visibility: Morphisec sheds light on shadow IT, misconfigurations, and high-risk software, revealing critical issues that may have gone undetected, thus mitigating potential impacts on your organization.

Defense-in-Depth: The implementation of AMTD provides a multi-layered defensive approach that enhances cyber-resilience against unknown evasive threats.

Improved Cybersecurity Posture: Morphisec boosts audit scores and helps in achieving compliance, which can contribute to reduced cyber insurance premiums, thus enhancing the overall cybersecurity posture.

Operational Readiness: Morphisec enhances team efficiency and effectiveness by eliminating attack dwell time and recovery efforts through proactive prevention. System hardening and virtual patching free up resources, allowing teams to concentrate on critical tasks instead of routine patching.

Value Proposition / Differentiation

Field Proven

Morphisec is battle-tested and protects over **7,000 organizations worldwide** with over **9 million devices**. It **prevents 10,000s of highly evasive ransomware and malicious attacks on a daily basis**. Just like a security camera can have its cord cut - regardless of what technology and approach an organization implements, all of those security tools can be bypassed/circumvented. Period.

Unique, Prevention-First Security

Morphisec is a pioneer in Automated Moving Target Defense (AMTD), which provides an extra layer of defense as well as assurance when these existing 'defenses' are side-stepped. AMTD works by dynamically changing the underlying configuration and software diversity of the device it is protecting - continuously altering the attack surface and hindering attackers' efforts to exploit vulnerabilities and weak points of the devices it is targeting. All while having no interaction from the organization's tech team (it all happens autonomously in the background) or having an impact on device performance. This adaptive approach provides a high level of resilience against advanced persistent attacks, ransomware, and mass software supply chain attacks (aka mass exploitation).

Morphisec continually improves an organization's operational readiness and cybersecurity posture by providing Anti-Ransomware Assurance and Adaptive Exposure Management modules on top of AMTD as additional add-on offerings. All 3 modules allow organizations to greatly improve their cyber resilience and reduce the blast radius of cyber attacks.

> "**Automated Moving Target Defense** is an emerging game-changing technology for improving cyber defense."
